Notes forming part of Financial Statements for the year ended 31st March, 2025

(All amounts in Indian rupees lakhs, unless otherwise stated)

1 General information

- 1.1** Integrum Green Assets Private Limited ('the company') bearing Corporate Identification number (CIN) - U40300KA2022PTC162666 was incorporated on 20th June, 2022. The Company is incorporated to carry on the business of seller, importer, exporters, suppliers and dealers of all kinds of power generation equipment's including Wind Mills and Turbines, Solar Modules and Panels, to promote, own, acquire, erect, construct, establish, maintain, improve, manage, operate, alter, carry on control, take on hire/lease power plants, co-generation power plants, energy conservation projects, power houses, transmission and distribution systems and supply of electrical power and energy, provide general management consultancy, project management consultancy, technical consultancy and liaison services for power generation, transmission and distribution businesses/projects, provide Engineering, Procurement & Construction (EPC) & Commissioning services for balance of plant associated with power projects and also to provide O&M (Operation and Maintenance Services) for power plants, transmission lines and sub-stations.

2 Summary of significant accounting policies

2.1 Basis of preparation of financial statements

The financial statements of the Company have been prepared on accrual basis, under the historical cost convention, on the principles applicable to a going concern and in accordance with the generally accepted accounting principles in India (Indian GAAP). These financial statements have been prepared to comply in all material aspects with the accounting standards notified under the Companies (Accounting Standards) Rules, 2021, specified under section 133 and other relevant provisions of the Companies Act, 2013.

2.2 Use of estimates

The preparation of the financial statements in conformity with Indian GAAP requires the management to make estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities and the disclosure of contingent liabilities at the end of reporting period. Although these estimates are based on the management's best knowledge of current events and actions, uncertainty about these assumptions and estimates could result in the outcomes requiring a material adjustment to the carrying amounts of assets or liabilities in future period(s). Any revision to accounting estimates is recognised prospectively in the current and future period(s). Significant estimates used by management in the preparation of these financial statements include revenue recognition based on percentage of completion method and related costs.

2.3 Revenue recognition

Revenue in respect to contracts for construction of Solar, Wind project is recognised as per AS 7 "Construction contracts"

Revenue in case of only transfer of goods is recognised when the significant risks and rewards of ownership are transferred to customers as per AS 9 "Revenue recognition".

Revenue in respect to other than construction contracts is recognised based on proportionate completion method if the services rendered to customers consists of more than one act as per AS 9 "Revenue recognition".

Revenue for the services rendered other than construction contracts to customers is recognised based upon completed service method when the service consists of only one act as per AS 9 "Revenue recognition".

Revenue arising from the use by others of enterprise resources yielding interest, royalties and dividends will be recognised when no significant uncertainty as to measurability or collectability exists. These revenues are recognised on the following bases:

- (i) Interest : on a time proportion basis taking into account the amount outstanding and the rate applicable.
- (ii) Royalties : on an accrual basis in accordance with the terms of the relevant agreement.
- (iii) Dividends from investments in shares Disclosure : when the owner's right to receive payment is established.

2.4 Property, Plant & Equipment

Tangible assets

Tangible assets are stated at cost, net of accumulated depreciation and accumulated impairment losses, if any. The cost comprises of the purchase price, borrowing costs, if capitalization criteria are met, and also includes costs that are directly attributable to bring the asset to its working condition for the intended use. Any trade discounts and rebates are deducted in arriving at the purchase price. Subsequent expenditure related to an item of tangible asset is added to its book value only if it increases the future benefits from the existing asset beyond its previously assessed standard of performance. All other expenses on existing tangible assets, including day-to-day repair and maintenance expenditure and cost of replacing parts, are charged to the Statement of Profit and Loss for the period during which such expenses are incurred.

Intangible Assets

The cost of an intangible asset comprises its purchase price, including any import duties and other taxes (other than those subsequently recoverable by the enterprise from the taxing authorities), and any directly attributable expenditure on making the asset ready for its intended use. Directly attributable expenditure includes, for example, professional fees for legal services. Any trade discounts and rebates are deducted in arriving.

2.5 Depreciation & Amortization

Depreciation on tangible assets would be provided on the written down value method using the rates arrived at based on the useful lives estimated by the management, as specified in Schedule II of the Companies Act, 2013. The parts of an asset having significant cost and having different useful life would be depreciated separately.

Leasehold improvements would be depreciated over the relevant lease period(s) including renewable period(s) or over their useful economic life, whichever is shorter.

Intangible assets are amortised on a straight-line basis over the useful economic life and assessed for impairment whenever there is an indication that the intangible asset may be impaired. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset are considered to modify the amortisation period or method, as appropriate, and are treated as changes in accounting estimates.

Integrum Green Assets Private Limited

CIN : U40300KA2022PTC162666

Notes forming part of Financial Statements for the year ended 31st March, 2025

(All amounts in Indian rupees lakhs, unless otherwise stated)

2.6 Impairment of assets

Assessment is done at each balance sheet date as to whether there is any indication that an asset (tangible and intangible) may be impaired. If any such indication exists, an estimate of the recoverable amount of the asset/cash generating unit is made. Recoverable amount is higher of an asset's or cash generating unit's net selling price and its value in use. Value in use is the present value of estimated future cash flows expected to arise from the continuing use of an asset and from its disposal at the end of its useful life. For the purpose of assessing impairment, the recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets. The smallest identifiable group of assets that generates cash inflows from continuing use that are largely independent of the cash inflows from other assets or groups of assets, is considered as a cash generating unit (CGU). An asset or CGU whose carrying value exceeds its recoverable amount is considered impaired and is written down to its recoverable amount. Assessment is also done at each balance sheet date as to whether there is any indication that an impairment loss recognised for an asset in prior accounting periods may no longer exist or may have decreased. An impairment loss is reversed to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined if no impairment loss had previously been recognised.

2.7 Borrowing cost

Borrowing cost includes interest, upfront fee / processing charges, loan syndication fees, letter of credit / letter of comfort charges, interest on debentures etc. Such costs directly attributable to the acquisition, construction or production of an asset that necessarily takes a substantial period of time to get ready for its intended use or sale are capitalised as part of the cost of the respective qualifying asset. A qualifying asset is one that necessarily takes substantial period of time to get ready for its intended use. All other borrowing costs are expensed in the period in which they occur.

2.8 Tax on income

Tax expense generally comprises of current tax provision and deferred tax adjustments as and when they arise. Current income-tax is measured at the amount expected to be paid to the tax authorities in accordance with the Income-tax Act, 1961 enacted in India. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted, at the reporting date.

Deferred income taxes reflect the impact of timing differences between taxable income and accounting income originating during the current year and reversal of timing differences for the earlier years. Deferred tax is measured using the tax rates and the tax laws enacted or substantively enacted at the reporting date. Deferred tax assets are recognised only to the extent there is reasonable certainty that the assets can be realised in future; however, where there is unabsorbed depreciation or carried forward loss under taxation laws, deferred tax assets are recognised only if there is a virtual certainty of realisation of such assets.

The carrying amount of deferred tax assets are reviewed at each reporting date. The Company writes-down the carrying amount of deferred tax asset to the extent that it is no longer reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available against which deferred tax asset can be realized. Any such write-down is reversed to the extent that it becomes reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available.

Unrecognised deferred tax assets of earlier years are re-assessed and recognised to the extent that it has become reasonably certain that future taxable income will be available against which such deferred tax assets can be realised.

Subject to the above, deferred tax adjustment(s) arising out of the timing differences originating during the tax holiday period and reversing after the expiry of the tax holiday period would be recognized in the financial statements, as and when they arise.

2.9 Provisions and contingent liabilities

A provision is recognised when the Company has a present obligation as a result of past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. Provisions are not discounted to their present value and are determined based on the best estimate required to settle the obligation at the reporting date. These estimates are reviewed at each reporting date and adjusted to reflect the current best estimates.

A contingent liability is a possible obligation that arises from past events whose existence will be confirmed by the occurrence or non-occurrence of one or more uncertain future events beyond the control of the company or a present obligation that is not recognised because it is not probable that an outflow of resources will be required to settle the obligation. A contingent liability also arises in extremely rare cases where there is a liability that cannot be recognised because it cannot be measured reliably. The Company does not recognize a contingent liability but discloses its existence in the financial statements unless the occurrence of contingent liability is remote.

2.10 Earnings/(Loss) per share

The earnings considered in ascertaining the Company's earnings per share comprise of the net profit/(loss) after tax. The number of shares used in computing the basic earnings per share is the weighted average number of equity shares outstanding during the year. The number of shares used in computing diluted earnings per share comprises the weighted average shares considered for deriving basic earnings per share, and also the weighted average number of shares, if any which would have been issued on the conversion of dilutive potential equity shares.

2.11 Cash and cash equivalents

Cash and cash equivalents comprises generally of cash at bank and in hand and short-term investments with an original maturity of three months or less.

Integrum Green Assets Private Limited

CIN : U40300KA2022PTC162666

Notes forming part of Financial Statements for the year ended 31st March, 2025

(All amounts in Indian rupees lakhs, unless otherwise stated)

2.12 Lease

Where the Company is the lessee

Leases where the lessor effectively retains substantially all the risks and benefits of ownership of the leased term, are classified as operating leases. Operating lease payments would be recognised as an expense and charged to the Statement of Profit and Loss on a straight-line basis over the lease terms.

2.13 Investments

Investments are classified as long term investments and current investments. Current investments are in the nature of current assets, although the common practice may be to include them in investments. Investments other than current investments are classified as long term investments, even though they may be readily marketable.

- a) The carrying amount for current investments is the lower of cost and fair value. In respect of investments for which an active market exists, market value generally provides the best evidence of fair value.
- b) Long-term investments are usually carried at cost. However, when there is a decline, other than temporary, in the value of a long term investment, the carrying amount is reduced to recognise the decline.
- c) Profit & Losses on sale of investments are recognised on its disposal.

2.14 Foreign currency translation

Foreign currency transactions are recorded in the reporting currency, by applying to the foreign currency amount, the exchange rate between the reporting currency and the foreign currency at the date of the transaction. Foreign currency non-monetary items are reported using the closing rate. Exchange differences arising on the settlement of non-monetary items at rates different from those at which they were initially recorded during the year, are realised as income or as expenses in the year in which they arise.

2.15 Employee benefits

i. Short Term employee benefits :

Short-term employee benefits, such as wages, salaries and social security contributions, paid annual leave, profit-sharing and bonuses (if payable within twelve months of the end of the period).

ii. Post Employment Benefits

iii. Defined Contribution Plan

2.16 Valuation of Inventory

Material comprises modules, wires, cables, components, stores and spares. Stock in trade comprises of land (Including agreements for sale & Lease Rights) acquired for Solar EPC projects.

Inventories are valued at lower of cost or net realisable value; cost is determined on the Specific identification method. Net realisable value is the estimated selling price in the ordinary course of business, less estimated costs of completion and estimated costs necessary to make the sale.

2.17 Current versus non-current classification

The Company presents assets and liabilities in the balance sheet based on current / non-current classification. An asset is treated as current when it is:

- a) Expected to be realised or intended to be sold or consumed in normal operating cycle
 - b) Held primarily for the purpose of trading
 - c) Expected to be realised within twelve months after the reporting period, or
 - d) Cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period.
- All other assets are classified as non-current.

A liability is current when:

- a) It is expected to be settled in normal operating cycle
- b) It is held primarily for the purpose of trading
- c) It is due to be settled within twelve months after the reporting period, or
- d) There is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period.

Deferred tax assets and liabilities are classified as non-current assets and liabilities. The Company classifies all other liabilities as non-current.

The operating cycle is the time between the acquisition of assets for processing and their realisation in cash and cash equivalents. The Company has identified twelve months as its operating cycle.

2.18 Changes in Accounting Policies

A change in an accounting policy will be made only if the adoption of a different accounting policy is required by statute or for compliance with an accounting standard or if it is considered that the change would result in a more appropriate presentation of the financial statements of the enterprise.

37 There are no contingent liabilities as at March 31, 2025.

38 There is no unhedged foreign currency exposure as at March 31, 2025.

39 Disclosure of Ratios

Ratio	Numerator	Denominator	Ratios as on 31st March 2025	Ratios as on 31st March 2024	% Change	Reason For Change
Current Ratio	Current Assets	Current Liabilities	0.01	7.38	-99.82	Refer Below Note (i)
Return On Equity	Net Profits after taxes - Preference Dividend (if any)	Average Shareholder's Equity	-0.14	-2.65	-94.75	Refer Below Note (ii)
Debt-Equity Ratio	Total Debt	Shareholder's Equity	0.71	-8.09	-108.74	Refer Below Note (iii)
Debt Service Coverage Ratio	Earnings available for debt service	Debt Service	-0.10	-0.21	-52.87	Refer Below Note (iv)
Inventory Turnover Ratio	Cost of goods sold OR sales	Average Inventory	NA	NA	NA	NA
Trade Receivables Turnover Ratio	Net Sales = Gross sales - Sales return	Average Accounts Receivable = (Opening + Closing balance/2)	NA	NA	NA	NA
Trade Payables Turnover Ratio	Net Purchases = Gross purchases - Purchase return	Average Trade Payables	NA	NA	NA	NA
Net Capital Turnover Ratio	Net Sales = Total sales - Sales returns	Working Capital = Current assets - Current liabilities	NA	NA	NA	NA
Net Profit Ratio	Net Profit = Net profit shall be after tax	Net Sales = Total sales - Sales returns	NA	NA	NA	NA
Return on Investment	(MV(T1) - MV(T0) - Sum [C(i)])	(MV(T0) + Sum [W(i) * C(i)])	NA	NA	NA	NA
Return On Capital Employed	Earnings before interest & taxes	Capital Employed = Tangible Net Worth + Total Debt + Deferred Tax Liability	-0.04	-0.24	-82.90	Refer Below Note (v)

Reasons for Change:

Note:

i) Current ratio:

The decrease is primarily on account of a disproportionate increase in current liabilities, mainly trade payables relating to construction of a power plant, whereas the corresponding increase in assets is reflected under Property, Plant and Equipment (non-current assets). Since the asset side increase is capitalised as PPE and not under current assets, the ratio has declined sharply.

ii) Return on Equity

The ratio continues to be negative due to net losses in both years. The apparent reduction in the negative percentage is attributable to the significant increase in average equity base during the current year, on account of infusion of fresh equity of ₹120 lakhs. The change in ratio does not reflect improvement in profitability but is a result of the widening of the denominator (shareholder's equity).

Integrum Green Assets Private Limited

CIN : U40300KA2022PTC162666

Notes forming part of Financial Statements for the year ended 31st March, 2025

(All amounts in Indian rupees lakhs, unless otherwise stated)

iii) **Debt-Equity Ratio**

The negative ratio in the previous year was due to negative net worth on account of accumulated losses. During the current year, the Company raised ₹75 lakhs through issue of Non-Convertible Debentures (NCDs) and ₹120 lakhs through fresh equity infusion, resulting in a positive net worth and a more stable capital structure. Consequently, the Debt-Equity Ratio has turned positive, and the percentage change appears abnormally high due to the shift from negative equity to positive equity.

iv) **Debt Service Coverage Ratio**

This is primarily due to operating losses during the year, resulting in negative earnings available for debt servicing, while debt obligations have increased following the issue of Non-Convertible Debentures (NCDs). The ratio is expected to improve as the Company's projects commence revenue generation and cash flows from operations strengthen.

v) **Return On Capital Employed**

The ratio remains negative due to higher operating losses in the current year. However, the apparent reduction in negative percentage is attributable to a significant widening of the capital employed base, on account of infusion of fresh equity of ₹120 lakhs and issue of Non-Convertible Debentures (NCDs) of ₹75 lakhs. Accordingly, the change in ratio does not reflect improvement in operating performance but is due to expansion of the capital base
